

FENDER LENGTH MEASURING INSTRUCTIONS

To measure for correct Fender length place measuring tape at center of padded seat.

Measure from center of padded seat to the rubber tread in the bottom of the stirrup, this will give us your inseam to bottom of your foot measurement. This measurement will enable us to select the proper fender length for your saddle.

STIRRUP ADJUSTMENT INSTRUCTIONS

Fender length and forward setting adjustments:

This front strap is for adjusting the forward stirrup set. Adjusting the buckle **upward** will pull the stirrup to a further forward position and allow you to stand in the stirrups without your feet getting behind you. If this action makes the stirrup length too short adjust the center buckle **down** to achieve the proper length. You may have to adjust the buckles up and down several times to achieve the most comfortable length and forward set to facilitate the maximum of your riding style.

Always be sure to remove the fender hobble strap while performing the fender adjustments or you may create a bubble in the fender and make the system non-functional.

From all of us at Panther Canyon Saddlery, A heartfelt thank You for purchasing what we and our customers think is the cutting edge in Barrel Racing saddles today. We take great pride in our efforts to create and build one of the finest quality and most functional saddles on the market today. We look forward to an extended and happy relationship.
